New isolated polypeptide and encoding nucleic acid derived from Staphylococcus epidermidis, useful for diagnosing, preventing and/or treating an S. epidermidis bacterial infection.

Claim 17; SEQ ID NO 6352; 741pp; English

The invention describes an isolated nucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 1-3772) and encoding an Staphylococus epidermidis polypeptide with any of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as given in the specification. Also described are: a recombinant expression vector, a cell comprising a recombinant expression vector of (1); producing an S. epidermidis polypeptide; an isolated nucleic acid comprising a nucleotide sequence of at least 8 nucleotides in length; a

```
aubject for S. epidermidis infection; a recombinant or arriver. Treating a subject for S. epidermidis infection; a recombinant or substantially pure preparation of an S. epidermidis polypoptide or its fragment; a vaccine composition for prevention or treatment of an S. epidermidis infection; detecting the presence of a Staphylococcus nucleic acid in a sample; a computer readable medium having recorded in it the nucleotide equences with SEQ ID NO: 1-3772 or its fragments; a computer based system for identifying fragments of the Staphylococcus genome of the Staphylococcus genome of the Staphylococcus genome of commercial important nucleic acid fragments of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of an Staphylococcal epidermidis bacterial confidencial in the amino acid sequence of a S. epidermids protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB 8; Length 335;

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid cancileded are:

(2) a vector comprising a promoter operably linked to the nucleic acid cancileded are:

(3) an isolated acid and promoter operably linked by the antisense cancileded are:

(4) an abost cell containing the vector; (3) an isolated polypeptide; (5) publicing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pethway or required for proliferation, (7) identifying a compound that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pethway in which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for the strains is present in a culture or collection of the strains is present in a culture or collection of strained for proliferation in cells other changed cards required for proliferation in cells other than S. aureus, S. typhimurium, contained for proliferation in cells other than S. aureus, S. typhimurium, contained that directify from NIPO at equence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this part directify from NIPO at equence is encoded by one of the contained of the contained of the proliferation of the printed sequence is encoded by one of the contained of the contained of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   121 IADNNRHKGIYKDLNKIAPTIELKSFDGDYNENIDAFKTISKALGKEEGKKRLEEHDKK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia chemselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, seruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the expressed proteins. The proteins can can be used to screen compounds in rational drug discovery programmes. The proteins can encise acids which are required for cell proliferation in a wide variety of organisms. The present sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent conformat directly from WIPO at celectronic format directly from WIPO at the printed specification, but was obtained in celectronic format directly from WIPO at

The present sequence is that of a novel Staphylococcus aureus surface-exposed immunogenic polypeptide (SEIP). To isolate SEIP genes, an expression library of S. aureus genomic DNA was screened with anti-SEIP antisers. DNA was isolated from clones expressing SEIPs, and amino acid sequences were deduced and analysed for conserved and/or functional domains. The present SEIP has sequence homology with the siderophore family of periplasmic binding proteins. The invention provides methods be used indantification, production and recovery of SEIPs. The SEIPs can be used individually, or in combination, to produce anti-staphylococcal antibodies useful in passive or active immunisation strategies to prevent or contain staphylococcal infection. They can also be used to develop

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) an bost cell containing the vector; (3) an isolated polypeptide (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway in which a proliferation, or that that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required gene product or that has an activity against a biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a gene product is compound; a activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for to which each of the strains is present in a culture or collection of strains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for proliferation in cells other candidate molecules for rational correlated for proliferation in cells other candidate molecules acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumonlae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent directly from NIPO at cellular directly fired missions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        69
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolating microbial target surface exposed immunogenic polypeptides, by immunizing host with microbial membrane-associated polypeptides to produce antibodies and using antibodies to isolate target polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the isolation of target surface exposed immunogenic polypeptides (SEIP) from microorganisms. The SEIP's of the invention are receptors of iron-binding molecules. The activity of polypeptides of the invention may be described as antibacterial, fungicide and protozoacide. Pharmaceutical compositions based on the polypeptides of the invention are useful for treating infections and diseases caused by microbes including bacteria, fungi and protozoa in a patient. They are also useful for topical disinfection in an animal or mammal e.g. human. The current sequence represents an SEIP of the
